

MD-OCRX

Architectural Patient Room Luminaire

Certolux's MD-OCRX series of recessed patient room luminaires provide a welcoming appearance and practical features. The MD1-OCRX is a single-function luminaire with a comfortable ambient source and an evenly illuminated convex drop lens. The MD2-OCRX adds a high-performance examination source, giving you two functions.

MD-OCRX is available with improved color rendering options, a range of color temperatures, and tunable white. The CRI or CCT for each function can be selected separately to provide both a comfortable space for the patient and accurate health assessments for the clinical staff. The hole-free housing and one-piece lens help maintain a clean fixture. Simple to install and wire using a removable access plate. Optionally, the illumination level can be adjusted from an integrated low-voltage controller providing safe patient-level switching or dimming.

Features:

- 2x2 standard size for grid ceilings
- One-piece convex lens
- Standard dimming (0-10V)
- Ambient and Exam illumination

Featured Options:

- Low voltage controllers with dimming
- DALI dimming
- Tunable White
