

# CRUiQ

## The Next-Generation Cleanroom Luminaire

Certolux introduces the CRUiQ, a revolutionary cleanroom troffer that delivers high performance with ease of installation and maintenance while enhancing sustainability.

Unlike outdated designs that rely on lockup screws, the CRUiQ introduces the innovative SureClose™ Door, a screwless mechanism that uses an over-center spring to provide continuous closing force.

The CRUiQ with enhanced lens luminance reduces veiling reflections from the many glossy surfaces commonly found in cleanrooms. This level of performance is rare in cleanroom lighting, especially compared to traditional flat panels that are not suited for these environments due to their inability to meet cleanliness standards.

A cornerstone of the CRUiQ is its commitment to sustainability. Every component is serviceable in place, and there is no need to disrupt the cleanroom by opening the ceiling. This reduces contamination risks and protects the integrity of air quality and pressure in the cleanroom. It is designed with Zhaga™ compliant, commercially available electrical components that are easily replaceable, significantly reducing electronic waste.

Certolux has continued to innovate. By eliminating screws, simplifying serviceability, addressing critical performance factors and sustainability, CRUiQ is more than just another luminaire—it's a cleanroom solution that stands apart.

### Features:

- No doorframe screws
- Easy cleaning
- Easy installation and servicing
- Constant gasket pressure
- Extremely reliable seal
- Sustainable and serviceable in place

### Options:

- Enhanced lens luminance provides lower glare than ordinary LED troffers
- Cleanroom compatible occupancy sensors
- 2" Grid and specialty grid systems
