

# MD-ALTO

## Lighting That Heals and Performs

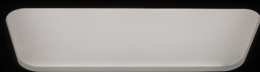

### Features:

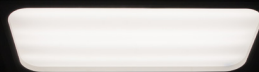

- Fully diffused regressed lens
- Easy to clean surfaces
- Illumination creates visual depth
- Overlapping sealed germ-shield lens

### Options:

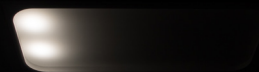

- Low voltage controllers with dimming
- Night observation light in white or amber
- Tunable White
- BIOS SkyBlue™

Ambient Only

Exam Only

Reading Only

Reading + Ambient

The MD-ALTO is a groundbreaking patient room luminaire that seamlessly merges high-performance functionality with sleek architectural design, setting a new standard in acute care lighting. Engineered to meet the rigorous ANSI/IES RP-29 criteria, this advanced fixture redefines how lighting can enhance both clinical precision and patient well-being.

At the heart of the MD-ALTO is its signature end-to-end illumination, offering a soft, inviting ambient glow that creates a calming atmosphere for patients. Beyond aesthetics, a secondary high-output function delivers precise, shadow-free exam lighting, supporting clinical tasks. Further, a pair of optional reading lights provide illumination specifically focused at the chest area.

For flexibility, the MD-ALTO features individually selectable CCT & CRI for ambient and exam. With BIOS and tunable white options also available, designers and healthcare professionals can tailor the patient environment for any task, from detailed examinations to fostering relaxation. All of this is packaged together, inside an industry leading, 3¼", shallow depth housing, which is finished with an antimicrobial coating. And for additional peace of mind, and damp location compatibility, an IP64 germ shield seals the fixture from the room side.

Inspired by the success of Visioneering ALTO, this versatile luminaire maintains a cohesive aesthetic across corridors, nurses' stations, exam bays, and right into patient rooms. Its distraction-free design not only complements modern healthcare interiors but also fosters a calming environment that promotes healing and recovery.

With the MD-ALTO, Certolux has solved the dual challenge of supporting clinical workflows and promoting patient well-being. Experience the difference of lighting that truly cares. Transform your healthcare spaces today!
