

Lester B Pearson

📍 Ontario, Canada

Project Overview:

The Challenge:

The project required a custom 20x60 fixture designed to meet the aesthetic demands of a “heritage” look, complete with a specialized paint finish. Additionally, they needed the fixture delivered quickly to align with their construction schedule. This project was critical as the custom fixture was essential for ensuring consistency with the existing ceiling layout, which featured odd-sized lights.

The Process:

We began by transforming initial concepts into a detailed design. This involved close collaboration with the engineering team and the product manager to develop and refine the concept drawing. Our team worked closely with the end user, incorporating their feedback to ensure the fixture met all specific needs and expectations. From the initial sketches on a napkin to the final product, our process was marked by constant adjustments to guarantee the fixture’s fit and finish.

Our Solution:

The final product was a custom fixture with a unique paint finish, tailored precisely to match the heritage design specified by the client. This solution was not only visually aligned with the existing ceiling layout but also seamlessly integrated into multiple phases of the project, demonstrating its critical role in the overall design scheme.

The Results:

Custom Solutions

Custom sized fixture tailored to the customer’s unique needs.

Close Work Partnership

Every step of the way from facility managers to the end user.

Reliable Quality

That translates to guaranteed performance, energy savings, and less maintenance
