## SIEMENS

### The Results:

#### Custom Solutions

A custom 20x60 retrofit solution with modern styling.

#### Cost Reduction

In delivering and completing the project as needed with shorter install time.

#### Reliable Quality

That translates to guaranteed performance, energy savings, and less maintenance.

### Project Overview:

#### The Challenge:

To upgrade the building's lighting system with a total Enlighted solution while maintaining the aesthetic appeal of the existing fixtures. Specifically, there was a need to update the look of the 20x60 fixtures with modern lighting. The task was to implement this comprehensive lighting control system while integrating the new design seamlessly with their existing setup.

#### The Process:

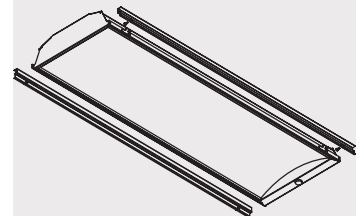

We presented various options that could meet the lighting needs. This was followed by a detailed site review to assess the current fixtures and electrical infrastructure. A custom fixture was developed specifically for the project and went through all the necessary approvals, thus meeting the customers satisfaction.

#### Our Solution:

A customized fixture with a OnCurve lens was developed with both the performance and the visual appeal. This product was designed to retrofit the existing fixtures while integrating seamlessly into the existing setup. The new fixtures fit inside the current housings, allowing for a smooth transition without needing to overhaul the entire lighting system.
